

Dear clients,

To test the quality of feed additives Woodhoff company uses only **EU APPROVED LABORATORIES AND FEEDMILLS IN THE COUNTRIES SUCH AS GERMANY, DENMARK, NETHERLANDS, UK AND FRANCE**, as well as the **LABORATORIES OF EUROFINS GROUP**. In Ukraine, the company uses Ukrainian representative of Eurofins that is "Agro Euro Testing Ukraine." Hereby we also inform you that the results of analysis provided only by abovementioned laboratories are the subject for discussion of controversial issues with the client.

The reason for such a decision is the results of multiple tests in various laboratories showing significant differences between the results of analysis in European laboratories or Eurofins in comparison with Ukrainian labs. For example, the results of analysis of protein level differed by 2-9%, even more analysis of acid value (KOH) in fishmeal showed figures varied in 5 times. In particular, similar differences were noticed in the results of analysis provided by Ukrainian feedmills.

ATTENTION! So once again we would like to underline that Woodhoff company uses only European professional laboratories and feedmills and this choice is based on experience and facts.

If you wish to analyze product quality and get reliable figures –
PLEASE USE CORRECT LAB!

With kind regards,
Woodhoff administration
